

Digital Public Infrastructure

Building Blocks for Resilient Economies

Dr. Pramod Varma
@pramodkvarma

Center for DPI
<https://cdpi.dev/>

We are used to (physical) public infra

But, societies are fast going digital

Can technology be used to drive access at massive scale? How do we balance the need for economic inclusion and market innovation without sacrificing sovereignty?

3

**DPI approach as a way to drive equitable access
via an innovative and competitive ecosystem**

We all use global DPIs every day!

Telcom

Powered by common protocols and standards – **GSM, SMS**, ...

Ensuring **global voice communication** interoperability

Allows **innovation** – handsets, applications, ...

Adoption is **driven by ecosystem** by unlocking value to users

Internet

Powered by common protocols and standards – **HTTP, HTML, SMTP**, ...

Ensuring **global information exchange** interoperability

Allows **innovation** – devices, applications, ...

Adoption is **driven by ecosystem** by unlocking value to users

Getting it right

Defining DPI

A set of technology building blocks
powered by interoperable open standards/specifications
operated under a set of enabling rules
having open, transparent, and participatory governance
to drive innovation, inclusion, and competition *at scale*

Then, what's DPG?

*A set of well designed assets/resources
in the form of specifications/software/data/content
made freely available
having its own lifecycle and governance
allowing others to build and operate their own DPIs*

DPIs are NOT about digitization in silos ...

Attempting to build
monolithic, centralized
systems goes against the
principles of
good DPI design

... and not about centralization

DPIs are
inherently decentralized,
managed by many,
evolved in different ways, and
need to work together to achieve
the transformation

They get connected and combined via
interoperability specifications/protocols

Solutions
built by
ecosystem

DPIs
as a set of
building
blocks

DPI design principles

01.

**Keep the design
absolutely
minimal**

02.

**Design for
interoperability**

03.

**Design for
evolvability via
generalization**

04.

**Design to allow
layered innovation
by others**

05.

**Leverage
ecosystem on
both supply and
demand side**

06.

**Build privacy &
security into
the design**

07.

**Design with
user at the
center**

08.

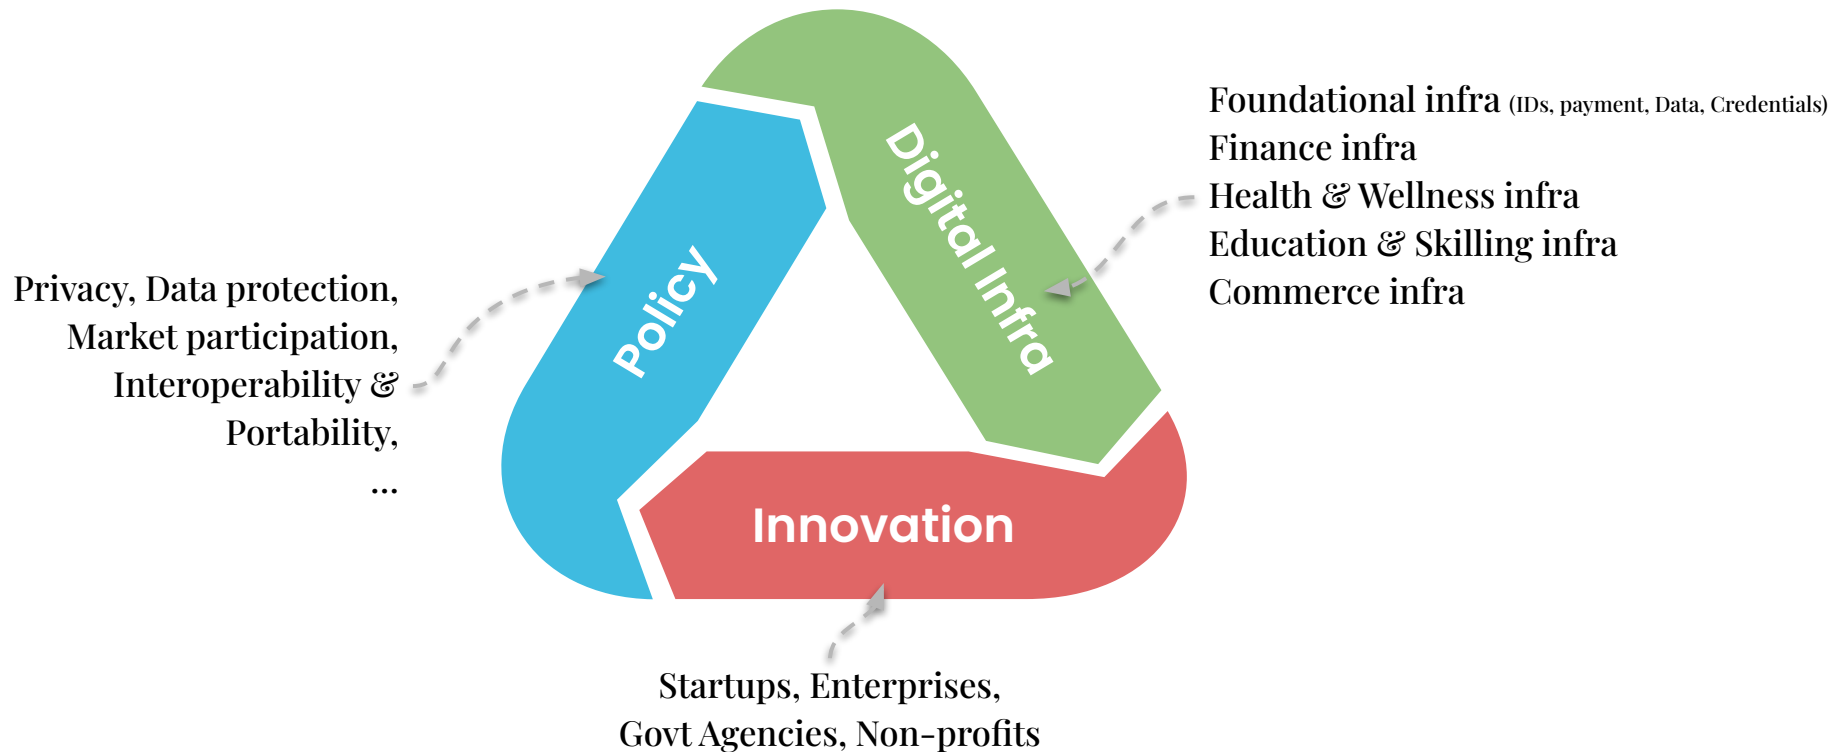

**Apply +1
thinking to
ensure adoption**

**It's all about
ecosystem and
user adoption!**

DPIs must harness and align 3 key pillars

Creating level playing ground, drive innovation, competition, and inclusion

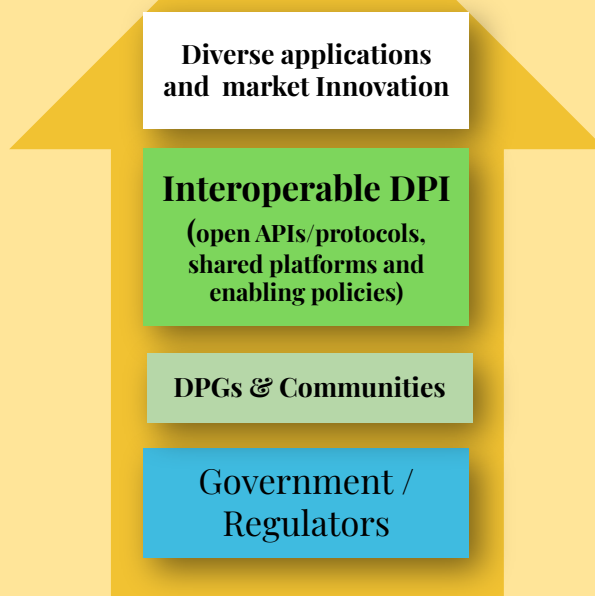

All Govt Approach

Single Provider
Slow Innovation

DPI Approach

Addresses diversity & choice
Encourages Innovation & competition,
Ensures openness and sovereignty

All Private Approach

Lack of interoperability
Lack of competition

The DPI approach works by using open tech standards & enabling policy to bring the best out of markets

Market: Innovative & competitive market players designing inclusive products

Governance: Legal & institutional framework; programs to drive adoption

Technology: Shared platforms and/or interoperable protocols & specifications

DPIs distributes the ability to solve by the ecosystem

triggering a sustainable & inclusive economic development

Thank you!
